**255w solar panel can connect to  
265 watt**

## Overview

---

Can you use solar panels with different wattages?

Both must have a diode, or both not have a diode and some kind of external power control to protect the battery. Properly done, yes you can parallel the panels for more current. You can use solar panels with different wattages and brands, but you have to connect them correctly. Find out the safe way use them in our guide.

Why should you choose SolarWorld SW 255 mono / 2.5 frame?

SW 255 mono / 2.5 Frame Fully-automated production lines and seamless monitoring of the process and material ensure the quality that the company sets as its benchmark for its sites worldwide. Plus-Sorting guarantees highest system efficiency. SolarWorld only delivers modules that have greater than or equal to the nameplate rated power.

How do I find the best wiring configuration for my solar panel?

Use our solar panel series and parallel calculator to easily find which common wiring configuration maximizes the power output of your solar panels. 1. Find the technical specifications label on the back of your solar panel.

How many volts does a solar panel have?

For example, let's say you have 3 identical solar panels. All have a voltage of 12 volts and a current of 8 amps. When wired in series, the 3 connected panels (often called a series "string") will have a voltage of 36 volts (12V + 12V + 12V) and a current of 8 amps. In this example, the series string will have no losses.

How do I wire solar panels in series?

To wire solar panels in series, connect the positive cable of one to the negative cable of the other. Here's a video showing you what I mean: That's it! If you want to connect more in series, just connect the positive cable of each

additional solar panel to the negative cable of your series string.

Can you use two solar panels at the same time?

Both panels within a few hundreds of a volt. Both must have a diode, or both not have a diode and some kind of external power control to protect the battery. Properly done, yes you can parallel the panels for more current. You can use solar panels with different wattages and brands, but you have to connect them correctly.
