380vdc uninterruptible power supply

Overview

Why should you use 380 VDC?

Using 380 Vdc reduces the normal operating current by a factor of 7 compared to 48 Vdc – so reducing copper use per kW of load – and greatly increases the flexibility of site designs, with batteries no longer required to be close to the power converters, and the load able to be located 100s of meters away from the power system.

Why should you choose Eltek 380 VDC systems?

Eltek's 380 Vdc systems provide operators with the ability to solve the combined challenges of ever greater power density, varying load types, and increased site flexibility without compromising on performance, cost, or serviceability.

What is flatpack2 DC/DC 380v/48v 3000W she?

Using the Flatpack2 DC/DC 380V/48V 3000W SHE module with Eltek's feature-rich Smartpack2 control and monitoring unit enables sites to benefit from utilizing 380 Vdc as a transmission voltage.

Either for a competitive alternative to traditional UPS in Data Centers, or for central power plants in Telecom site expansions.
