# 60 type photovoltaic panel size

## Overview

---

How big is a 60 cell solar panel?

In comparison, 72-cell panels are a bit larger, at about 80 inches by 40 inches. Many people want to know the physical size of solar panels, not just how many cells they hold. The average 60-cell solar panel is about 65 inches by 39 inches, or 5.4 feet by 3.25 feet, and weighs around 40 to 50 pounds.

What are the different sizes of solar panels?

There are three main sizes of solar panels to know: 60-cell, 72-cell, and 96-cell. For commercial and residential solar panels, the 60-cell and 72-cell solar panels size are most commonly used as the 96-cell measures 17.5 square feet – which can make for a challenging fit on your roof.

How much does a solar panel weigh?

Most home solar panels are about 5.5 feet x 3 feet and weigh roughly 40 pounds each. Most of the time, you won't see the size of solar panels expressed in feet. Instead, you'll see it's listed as the number of solar cells within a panel, with the most common solar panel sizes being 60-cell and 72-cell.

What are the different types of solar panels?

Solar panels are available in several standard sizes, with the most common being 60-cell and 72-cell configurations. These dimensions are based on the number and arrangement of photovoltaic (PV) cells within the panel. 60-cell solar panels are popular for residential installations due to their manageable size and weight.

What is the difference between a 60-cell and 72-cell solar panel?

The standard solar panel size, the 60-cell is structured as a 6x10 grid and measures 3.25 feet by 5.5 feet. The average 72-cell solar panel size measures 3.25 feet by 6.42 feet and is laid out as a 6 x 12 grid, making them almost a

foot taller than the 60-cell standard size panels.

How big is a 96 cell solar panel?

96-cell solar panel size. The dimensions of 96-cell solar panels are as follows: 41.5 inches long, and 63 inches wide. That's a  $63 \times 41.5$  solar panel. This form is a bit shorter but wider. This is the typical classification of solar panel sizes (based on the solar cell size). It's a bit theoretical and quite useless for most calculations.
