## Overview

How are energy storage batteries integrated in a non-walk-in container?

The energy storage batteries are integrated within a non-walk-in container, which ensures convenient onsite installation. The container includes: an energy storage lithium iron phosphate battery system, BMS system, power distribution system, firefighting system, DC bus system, thermal management system, and lighting system, among others.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

How long is a 5MWh liquid-cooling energy storage cabin?

The layout project for the 5MWh liquid-cooling energy storage cabin is shown in Figure 1. The cabin length follows a non-standard 20'GP design (6684mm length × 2634mm width × 3008mm height). Inside, there are 12 battery clusters arranged back-to-back, each with an access door for equipment entry, installation, debugging, and maintenance.
