

## SolarGrid Energy Solutions

# Albania 12v ups uninterruptible power supply

## Overview

---

What is a UPS 12V?

The UPS 12V is a backup power source for devices with a 12V DC power supply. It provides a stable output voltage of 12V up to 1.5A and offers information of external power supply outage via a built-in relay output. A UPS 12V is compatible with all HW group devices powered by 12V power adaptors.

Is 230V ups a good option for monitoring PBX & controll systems?

In the IT industry and households, back-up power supply (UPS) is a standard equipment. However, for small devices such as monitoring PBX or control systems that use 12V adapters, there are no similar back-up power supplies. Installing a wasteful 230V UPS is an inefficient solution.

How does a 12V back-up power supply work?

In case of a power network outage, a 12V back-up power supply starts powering the device from a standard 12V adapter (12V/1,5A). The same adapter can also power the final device normally. The battery powers the device and a signal relay opens, allowing the device to notify its user about the power outage and correctly terminate its activities.
