Algerian photovoltaic module export companies

Overview

How many solar panels will be produced in Algeria?

The plan is to produce 14 different PV solar products with a total annual output of 555 MWp, including the innovative poly and mono-perc modules and the super high-performance modules of the HJT class. The local production of solar panels is the heart of the integrated industrialization program of the Terra Sola consortium for Algeria.

Will Algeria become Africa's leading solar center?

In the Sidi Bel Abbès industrial park, the factory for solar modules will also have its own research and test institute in order to continuously improve the efficiency and quality of the solar modules and to integrate the latest technical findings. This will permanently secure Algeria's position as Africa's leading solar center.

Can Algeria be the first African country to start a solar energy transition?

The USD 5 billion integrated solar program of the Terra Sola Consortium, which was specially tailored to the needs of Algeria in cooperation with local ministries, creates the basis in Algeria to be the first African country to successfully initiate the energy transition.
