## Overview

---

Significantly lower raw material costs and more affordable battery technologies are driving investments in the Asia-Pacific region's battery energy storage system (BESS) market. Does Singapore have a battery energy storage system?

Of the 11 ASEAN members, Singapore is taking the lead in the battery energy storage systems (BESS) space. Earlier this year, the city-state launched the region's largest battery energy storage system (BESS).

What is a battery energy storage system?

A battery energy storage system is a power station that uses batteries to store excess energy. A BESS is a potential unsung hero in the world's efforts to pivot to more renewable energy sources in the power sector.

What is a battery energy storage system (BESS) in Singapore?

Singapore's new BESS will help mitigate the solar intermittency caused by changing weather conditions in the region's tropical climate. Because wind and solar resources aren't constantly available and predictable, they're referred to as intermittent energy resources. What Is a Battery Energy Storage System (BESS)?

What is battery energy storage systems (BESS)?

Battery Energy Storage Systems (BESS) and related solutions are critical for Asian countries to reach stated renewable energy targets. Many governments have already identified this need and are implementing or planning programmes to create favourable market entry conditions for foreign businesses.

Does ASEAN need energy storage?

The ASEAN bloc has set the targets of 23% renewable energy in its Total Primary Energy Supply (TPES) and 35% renewable energy in ASEAN installed power capacity by 2025. This means that energy storage is required. Additionally, without BESS acceptance on a larger level, the needed funds won't materialise, and fewer BESS will be built.

Why is battery storage important?

Battery storage is considered the fastest responding source of power on grids and is used to stabilise an otherwise unstable grid system. It is necessary for an uninterrupted power supply. A BESS can be charged by electricity generated from renewable energy, like wind and solar power.
