# Can battery cabinets be stacked on top of other items

## Overview

---

Maintain separation from other batteries/objects: Batteries and battery packs should never be stacked on top of each other or have items placed on top of them. Can button batteries be stacked?

Button batteries can be stacked together if the voltage between them is 1/2 Volt or less. When all batteries are fully balanced, you can stack them together for use with the power module placed on top of each other.

Should stacked batteries be used?

In many cases, devices that require stacked batteries have removable inserts you can use to arrange the batteries or a tube in which you can insert one battery at a time. You should only stack batteries if the device or project specifically requires it. Stacking batteries increases the voltage.

Do battery cabinets need to be locked?

Battery cabinets must enclose the batteries behind locked doors accessible only to authorized personnel. As long as the cabinets are kept locked, they can be located in a computer room or other rooms accessible by non-battery technicians.

How should batteries be stored?

Manufacturer instructions: Always refer to the manufacturer's instructions on the best/safest way to store batteries and adhere to their guidance. Storage Temperature Range: Batteries should be stored in a cool, dry place, ideally at room temperature.

How do you protect a battery pack?

Protect batteries from loose metal objects: Keep batteries away from loose metal objects, such as screws, nails, tools, etc. to prevent short circuits. Maintain separation from other batteries/objects: Batteries and battery packs should never be stacked on top of each other or have items placed on top of

them.

Should a battery be fully charged during long-term storage?

During long-term storage, batteries should never be continuously charging, nor should they be fully charged or fully discharged. The rationale for each is as follows: Continuously charging: Battery failure is most likely to occur during charging. Continuously charging over long periods of time greatly increases the risk.
