## Overview

---

Can solar panels be installed on a roof?

Installing solar panels on a roof is an efficient way to harness renewable energy and reduce your carbon footprint. Pitched slate or tile roofs are commonly used for Solar PV installations because the process is relatively straightforward.

Can a wall install a photovoltaic system?

Although less efficient, wall installations can supplement a photovoltaic system effectively. Balcony-mounted panels are primarily used in residential buildings. Typically, 1-2 panels are installed on the balcony railing. This setup can help reduce energy costs for apartments where roof installation is not feasible.

Should you install photovoltaic panels on your property?

Year by year, more people choose to install photovoltaic systems on their property. When opting for this form of energy generation, it is crucial to select appropriate panels and consider the right location for the installation.

What type of roof is used for solar PV installations?

Pitched slate or tile roofs are commonly used for Solar PV installations because the process is relatively straightforward. The small, segmented nature of the roof covering allows for easy removal of small sections, and there is a wide range of pitched roof fixing products available on the market.

How should photovoltaic panels be installed?

Proper installation of photovoltaic panels is crucial for ensuring the system operates efficiently for many years. To verify the correctness of the installation, several key aspects should be examined. Firstly, panels should be installed in a location with optimal sun exposure, ideally facing south.

## Do felt roofs need special care during photovoltaic installation?

Felt roofs require special care during photovoltaic installation. As felt absorbs heat significantly, adequate ventilation between the panels and the roof is essential to prevent overheating, which could reduce system efficiency. Installations on felt roofs use special seals to prevent water infiltration at mounting points.
