

# Capacity of one energy storage battery

## Overview

---

What is battery energy storage capacity?

Battery energy storage capacity is the total amount of energy the battery can store, measured in kilowatt-hours (kWh) or megawatt-hours (MWh). Think of this as like the size of a water tank where you measure the water capacity in litres.

What is the capacity of a battery?

This is the energy that a battery can release after it has been stored. Capacity is typically measured in watt-hours (Wh), unit prefixes like kilo (1 kWh = 1000 Wh) or mega (1 MWh = 1,000,000 Wh) are added according to the scale. The capability of a battery is the rate at which it can release stored energy.

What is battery storage duration?

Battery storage duration describes how long the battery can discharge at its rated power. It's calculated: Energy Capacity (MWh) ÷ Power Rating (MW). A 4 MWh battery with a 1 MW power rating has a 4-hour duration. A 1 MWh battery with a 2 MW power rating has a 0.5-hour duration. We've written about storage duration in more detail [here](#).

What is battery storage?

Battery storage is a technology that enables power system operators and utilities to store energy for later use.

What are the technical measures of a battery energy storage system?

The main technical measures of a Battery Energy Storage System (BESS) include energy capacity, power rating, round-trip efficiency, and many more. [Read more.](#)

What is the difference between rated power capacity and storage duration?

Rated power capacity is the total possible instantaneous discharge capability (in kilowatts [kW] or megawatts [MW]) of the BESS, or the maximum rate of discharge that the BESS can achieve, starting from a fully charged state. Storage duration is the amount of time storage can discharge at its power capacity before depleting its energy capacity.
