## Overview

---

What type of batteries are used in energy storage cabinets?

Lithium batteries have become the most commonly used battery type in modern energy storage cabinets due to their high energy density, long life, low self-discharge rate and fast charge and discharge speed.

What is energy storage cabinet?

Energy Storage Cabinet is a vital part of modern energy management system, especially when storing and dispatching energy between renewable energy (such as solar energy and wind energy) and power grid. As the global demand for clean energy increases, the design and optimization of energy storage sys.

Why do energy storage cabinets use STS?

STS can complete power switching within milliseconds to ensure the continuity and reliability of power supply. In the design of energy storage cabinets, STS is usually used in the following scenarios: Power switching: When the power grid loses power or fails, quickly switch to the energy storage system to provide power.

What is a lithium battery management system (BMS)?

Lithium battery modules are usually composed of multiple battery cells, so they need to be monitored and managed by a battery management system (BMS). Battery Management System (BMS): BMS is responsible for monitoring the status of the battery to ensure that each battery cell is within a safe operating range.
