# China Solar Smart On-site Energy Prices

**LPR Series 19'  
Rack Mounted**

## Overview

---

How much do solar panels cost in China?

The price of monocrystalline solar modules in China is an average of RMB 1.89 yuan per watt. Outside of China, the cost of conventional multicrystalline solar modules is between \$0.218 and \$0.290 per watt, with an average of \$0.22 per watt.

Will China's solar energy conference be subdued?

As the world's biggest solar energy conference kicks off in Shanghai on Tuesday, the mood is likely to be subdued as Chinese solar panel producers grapple with oversupply and price reforms.

Will solar power prices rise at night?

Nonetheless, risks of revenue fluctuations and price volatility are likely to intensify as PV generation peaks at midday, potentially leading to an oversupply of electricity and thus driving down selling prices, while nighttime prices may rise due to insufficient generation.

Will future PV electricity prices increase?

As PV electricity becomes increasingly market-driven and government pricing interventions phase out, uncertainties surrounding future market electricity prices will increase, but the actual situation remains to be seen as this policy takes effect.

What will China's new PV projects look like in 2025?

Considering the impact of the new market-based transaction policy and other regulatory policies, China's new PV installations in 2025 are expected to be dominated by ground-mounted projects, which are expected to exceed 60%. Meanwhile, residential PV is likely to fall below 10%, with C&I projects stabilizing at around 30%.

## China Solar Smart On-site Energy Prices
