How has privatization impacted the solar power industry in Turkey?

The government also believes that the privatization of the power distribution in the country has contributed to boosting the level of competition and subsequently growing the solar capacity in the country. There is a good mix of local and foreign suppliers and distributors of solar power equipment in Turkey.

Where to transport solar equipment & supplies in Turkey?

Turkey's logistics and trade activity is facilitated through one of its many commercial seaports. The following are some of the busiest ports that you can take advantage of to transport solar equipment and supplies: Port of Ambarli.

Why should you invest in solar power in Turkey?

There is a good mix of local and foreign suppliers and distributors of solar power equipment in Turkey. This makes it easy to promote solar PV capacity in the country, whether for residential and commercial installations. Turkey's logistics and trade activity is facilitated through one of its many commercial seaports.

Where are solar inverters located?

Microinverters are located on the roof near the solar panels, due to which these inverters are more efficient than string inverters when it comes to converting energy. Solar systems with microinverters can still generate electricity, even if one or two panels do not perform properly.

What is a microinverter solar system?

Typically, microinverters are “distributed” inverters. Solar PV systems with microinverters have a small inverter installed for each individual solar panel. Instead of sending energy from every panel to a single inverter, microinverters convert the DC energy to AC energy on the roof itself.

Why should you add solar inverters to your inventory?

Besides solar panels, there are other components like solar inverters that are critical for both consumers and businesses. Particularly, if you are a solar installer, adding solar inverters to your inventory will help your business grow since users need this equipment to maximize and regulate the solar energy of their solar system.
