Communication Base Station EMS Weekly Report

Overview

Why is communication important in EMS?

Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.

How does EMS rebroadcast a radio signal?

Some rebroadcast by converting signals to radio and others do so by converting to microwaves. It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band.

What frequency does EMS radio communication take place in?

EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz). They are able to follow the shape of the earth allowing communication over long distances. These frequencies are more susceptible to interference from, weather, buildings, and electrical equipment.

How does an EMS system work?

In some EMS systems, simple standard communications are transmitted by pushing a button on a mobile data terminal (MDT) mounted in the ambulance. Carry portable radio whenever you leave unit. Report must be given to destination hospital so it can prepare for arrival.

Should radio communication systems be used for early warning and disaster relief?

Developing and implementing common technical characteristics and guidelines for radio communication systems for early warning and disaster

relief, would promote a common technical basis in planning for and responding effectively to an emergency.

How does an EMS responder determine effective communication?

At a small scene of up to three individuals, EMS must determine if effective communication can occur with the number of team members who have responded. Each EMS responder assesses an individual and communicates that patient's needs back to the team.
