# Conakry communication operator base station construction

## Overview

---

Why is construction of mobile communication base stations important?

The construction of mobile communication base stations is an important part of the investment of mobile communication operators, and is generally carried out around factors such as coverage, call quality, investment benefits, construction difficulty, and maintenance convenience.

What is a mobile communication base station?

Mobile communication base station is a form of radio station, which refers to a radio transceiver station that transmits information between mobile phone terminals through a mobile communication exchange center in a certain radio coverage area.

What is a macro base station?

A macro base station refers to a wireless signal transmitting base station of a communication operator. A macro base station has a large coverage distance, generally 35 km, and is suitable for suburban areas with dispersed traffic. It has omnidirectional coverage and high power.

What is a micro base station?

A micro base station is mostly used in cities with a small coverage distance, generally 1-2 km, and directional coverage. A micro-micro base station is mostly used for blind spot coverage in urban hotspots. Generally, the transmission power is very small and the coverage distance is 500m or less.

What will the future of base stations look like?

In terms of composition architecture, various base stations will become open modular products: in terms of technology, future base stations will develop in the direction of higher integration, full IP, multi-carrier and more efficient digital power amplifier.

What is a distributed base station?

Distributed base stations divide traditional macro base station equipment into two functional modules according to their functions. The baseband, main control, transmission, clock and other functions of the base station are integrated into a module called baseband unit BBU (Base Band Unit).

## Conakry communication operator base station construction

---

### Optimizing redeployment of communication base station

Feb 6, 2025 · The main research content of this paper is to study the information about the existing network BSs and weak signal coverage points in a certain area, idealize the BS ...
