

# **Container generator set inspection items**

## Overview

---

What is a containerised generator set?

On a regular basis, containerised generator sets (CGS) are placed on board ships to provide replacement power in case of a damage to one of the ship's generator sets, or additional power, e.g. to provide power to extra deck equipment or reefer containers. There are currently no clear rules and requirements for such time limited installations.

What is a generator inspection checklist?

This sign-off is vital to ensure that inspectors take the inspection seriously and provide the best, most informative, and truthful observations. The Generator Inspection Checklist is straightforward to use. You must download the template, print and copy the checklists you need for your equipment, and train your team to use the document.

What is included in a generator inspection?

During a generator inspection, all exhaust fittings are checked to ensure tightness and to prevent exhaust leaks. A visual check of the gas plumbing from the gas supply to the generator set is performed to ensure the use of all proper fittings and to prevent problems due to corrosion, vibration, or high temperatures.

How to choose a marine generator?

The generator should be suitable for the marine environment, preferably documented through a class society's product certificate, type approval or similar. Normally the generator rating shall be less than or equal to the generator it replaces.

How do I accept a CGS for installation?

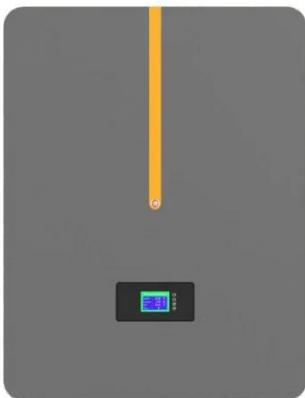

In order to accept a CGS for installation, the items in [2.4] to [2.12] shall be addressed. Please note that the requirements are based on a CGS with an

engine power of more than 375 kW. If the engine is smaller, the CGS is not considered a machinery space of category A and some criteria may be relaxed or waived.

Can an emergency generator be installed at a specified angle?

When intended to function as replacement of the vessel's emergency generator, it shall be documented that the engine can operate at the angles required for emergency generators, see Table 6 (or DNV-RU-SHIP Pt.4 Ch.1 Sec.3 Table 3). If this can not be documented, the engine shall be tested under load at the specified angles before being installed.

## Container generator set inspection items
