Cyprus 800MW energy storage project

Overview

Cyprus will establish its first large-scale electricity storage infrastructure within the next 16 months, Energy Minister George Papanastasiou announced at the Green Agenda Cyprus Summit in Nicosia on Monday. What is the Cyprus pumped-storage project?

It also advises the Cyprus Government on developing national strategies for pumped-storage plants and renewable offshore energy. To this end, the project is drafting contract templates and technical specifications in order to implement corresponding projects.

Can Floating photovoltaic plants be used in Cyprus?

The conditions for using floating photovoltaic plants, energy storage and renewable offshore energy in Cyprus have improved. The project examines the feasibility and potential of floating photovoltaic plants in Cyprus. It also advises the Cyprus Government on developing national strategies for pumped-storage plants and renewable offshore energy.

Can Cyprus harness green energy at sea?

Cyprus has significant potential to harness green energy at sea - for example, offshore wind energy, meaning through wind power plants at sea, or ocean energy. However, projects using these technologies have not yet been implemented in Cyprus.

What does the Green Energy Council do in Cyprus?

With its Cypriot partners, it identifies obstacles and drafts recommendations for developing floating photovoltaics, pumped-storage plants and offshore renewable energy. In this way, it contributes to protecting the climate and expanding green energy in Cyprus.

What kind of electricity is used in Cyprus?

The rest of the electricity supply in Cyprus is based exclusively on heavy fuel

oil and diesel power plants, which are harmful to the environment and climate. There is also very limited space available to install photovoltaic and wind power plants.

When will commercial energy storage systems be fully installed & connected?

All systems must be fully installed and connected to the grid by June 2026. Although TSOC retains ownership and operational control, CERA has stipulated that private storage operators will receive priority for grid services, preserving space in the market for commercial energy storage initiatives.
