# Damascus portable ups uninterruptible power supply

## Overview

---

What is an uninterruptible power supply (UPS)?

However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in. Its main function is to act as a big battery that powers your devices when your electricity goes out.

Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

What is the best ups?

Read More » Our pick for the best UPS overall goes to the APC BR1500G Backup Battery. At 1500VA/865W, it can power most devices, including computers, external hard drives, and wireless routers, from a few minutes to several hours, depending on the total connected load.

What is a ups & how does it work?

A UPS's job is to provide power to the devices connected to it if a primary power source is cut off or the voltage reaches extremely low levels. Primarily designed for things like PCs and network systems, it's basically a huge battery that works as a middle ground between standard AC power and a generator.

Can a ups power a router?

Customers appreciate the UPS's power source capabilities, with one mentioning it can provide power to POE devices, while another notes it can power a router and modem via PoE or 12V, and another reports successful operation with home security cameras.

How many a/C outlets does an ups have?

The UPS has four outlets with battery backup and surge protection and four with just surge protection. Four outlets are nicely spaced out, so you can easily connect devices with larger plugs. Unfortunately, this UPS does not have USB ports, so the eight A/C outlets are all you'll get.
