**Does the RV have its own  
outdoor power supply Is it safe**

## Overview

---

Does an RV have a battery?

Every RV has either a battery or a series of batteries installed for providing a source of power in the absence of an external power source. Most RV's will come factory with a Deep Cycle Battery. Deep cycle batteries can run the electronic equipment that uses low power, things like the lights, and even some small appliances.

What type of power does an RV have?

120-volt alternating current (AC): The power for this system comes from the RV electrical hookup or generator. It runs daily-use items like kitchen appliances, TVs and other large electrical appliances. The battery is a single 12-volt or two 6-volt in a series circuit. An RV with two batteries has a longer battery life.

How do RVs get power?

RVs typically get power from two electrical systems: 12-volt direct current (DC): This system runs on one battery or several. It powers the water heater, furnace and fridge startup, among other things like lights. 120-volt alternating current (AC): The power for this system comes from the RV electrical hookup or generator.

Do RV batteries work on shore power?

Slide-Outs: If your RV has slide-outs, they often work more reliably when powered by shore power rather than your battery system. Battery Charging: Plugging in right away ensures your RV's battery system begins charging as soon as possible. Before you get started, make sure you have the following essential gear:.

How does an RV power a house?

You can also maintain electrical safety as you operate the power. RVs typically

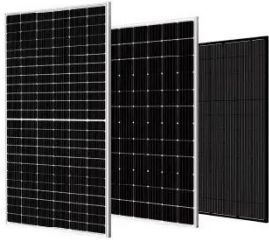

get power from two electrical systems: 12-volt direct current (DC): This system runs on one battery or several. It powers the water heater, furnace and fridge startup, among other things like lights.

Do I need AC or DC power for my RV?

In order to do this, you need both AC and DC power. Multiple configurations create energy efficiency, system redundancies, and circuit isolation. In short, it lets you utilize both AC power coming from shore power when you're plugged in, and DC power from the RV's batteries when you are not plugged in to shore power. It's the best of both worlds.
