What are the benefits of ex pressure enclosures for cabinets?

A weight saving of up to 50% is possible as a result of this reduction in wall thickness. The new EXpressure technology revolutionises explosion protection. The Ex d enclosures for cabinets are lighter and feature minimum space requirements. Moreover, users benefit from faster engineering and lower operating costs.

How do ex pressure cabinets work?

REINVENTED! The new EXpressure cabinets are revolutionising the science of explosion protection. They are equipped with grids made from stainless steel wire mesh in the walls through which pressure flows in the event of an explosion. The wire mesh absorbs the heat energy and the pressure dissipates.

What causes fire & explosion inside a Bess enclosure?

The leading cause of fire and explosion inside a BESS enclosures is the release and ignition of combustible vapors from an overheating battery.

Why should you choose ex pressure ex D cabinets?

The wire mesh absorbs the heat energy and the pressure dissipates. Thus, the pressure inside the enclosure is reduced to less than 1 bar. The wall thicknesses are reduced to just 2 mm. This makes EXpressure Ex d cabinets considerably lighter. The innovative enclosure design offers additional options for control solutions in hazardous areas.

Where can I find information about Bess explosion protection?

To learn more about BESS explosion protection, or to find your local IEP sales, service, and support center, visit or contact +1 855-793-8407. Concerned about your explosion risk?

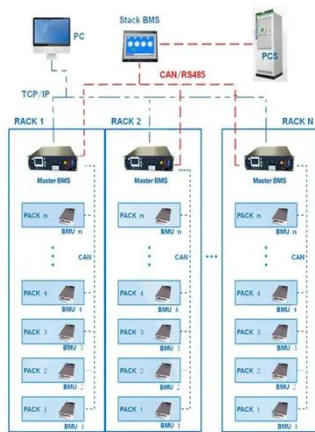

.

What is an expressure enclosure?

The space-saving EXpressure enclosure concept provides you with a more compact machine and system design. Now you need just one Ex d cabinet for your control system. This EXpressure cabinet has a significantly smaller installation surface than the enclosure combination comprising multiple single enclosures.
