Flow Battery Container System

Overview

Engineered for stability (tank placement, robust piping) and equipped with sophisticated electrolyte management and HVAC systems, Flow BESS Containers excel at economically storing solar or wind energy for days or weeks. What is flow battery technology?

Flow battery technology is modular and scalable so systems can be made to suit a wide range of applications, from power ratings of watts to megawatts, and with energy durations of many hours or even days. The battery can be constructed of low cost and readily available materials, such as thermoplastics and carbon-based materials.

Are flow batteries intrinsically linked?

Because of the specific technology, stored energy in and power supplied by flow batteries are not intrinsically linked. This feature makes them especially suitable for storage systems for renewables, especially for uses with long discharge times.

Should flow batteries be considered a growing technology?

Flow batteries should be considered a growing technology: further developments are needed to reduce costs and increase overall efficiency in order to rise to lithium system standards. A drop in prices in the last decade has led to the widespread diffusion of lithium batteries in storage systems.

Are flow batteries sustainable?

Storage systems with flow batteries are built from raw materials with higher availability and less environmental impact than their lithium cousins, making them more sustainable.

Is a flow battery safer than a lithium ion battery?

In terms of safety, a flow battery has an operating system with fewer critical issues to manage than a lithium ion battery, which needs several control

systems to avoid harmful overloading and overheating. Because of the specific technology, stored energy in and power supplied by flow batteries are not intrinsically linked.

Why should you choose Everflow flow batteries?

EverFlow flow batteries offer maximum performance and scalability together with safety and recyclability. The EverFlow portfolio with storage solutions for small and mid-sized up to multi MWh size offers solutions for commercial and industrial customers as well as the utilities.
