Forklift lithium battery pack land transportation requirements

Overview

How to prepare lithium batteries for safe transport?

A clear warning label should suffice. In short, preparing lithium batteries for safe transport involves careful discharge, protection, packaging, labeling, and communication. Follow these steps, and you're on the right path to safe and compliant transport.

When should lithium-ion batteries be offered for transport?

Effective from 1 January 2025, it is recommended that, for lithium-ion cells and batteries which are contained in equipment, those cells and batteries are offered for transport: at a state of charge not exceeding 30% of their rated capacity; or with an indicated battery capacity not exceeding 25%.

What are the dot packaging standards for lithium batteries?

The DOT packaging standards for battery safety are rigorous and designed to minimize risks associated with transporting lithium batteries. These standards require that lithium batteries must be packed in strong outer packaging that can withstand drops, stacking, and typical transport conditions.

What are the requirements for packaging a lithium battery?

* The outer packaging must be a strong rigid outer package that is capable of withstanding a 1.2 meter drop test without damage to the cells or batteries, without shifting that would allow battery-to-battery contact, and without release of the contents of the package. • For packages with lithium cells or batteries contained in equipment:.

When will lithium ion batteries be available for air transport?

From 1 January 2026, lithium-ion batteries that are packed with equipment and vehicles powered by lithium ion or sodium ion batteries must be offered for air transport with the battery at a reduced state of charge, unless otherwise approved by the relevant tates (A331).S.

What are the regulations for lithium batteries?

Air Transport: The regulations here are more stringent. You must comply with the International Civil Aviation Organization (ICAO) Technical Instructions, which the DOT enforces. Sea Transport: Under DOT regulations, sea transport of lithium batteries needs adherence to the International Maritime Dangerous Goods Code.
