

## SolarGrid Energy Solutions

# France s mandatory photovoltaic energy storage project

## Overview

---

The French government has published Decree No. 2024-1023, mandating solar installations on parking lots larger than 1,500 sqm. Can you install solar panels on a parking lot in France?

From pv magazine France The French government has published Decree No. 2024-1023, mandating solar installations on parking lots larger than 1,500 sqm. The provisions define how to calculate the surface areas subject to the rule. They outline exemption criteria and set fines for non-compliance.

Can photovoltaic shades be installed near roads in France?

Several measures specifically make it easier to deploy solar thermal and photovoltaic near roads, on the coastline. The bill makes it mandatory to install photovoltaic shades in outdoor car parks of more than 2,500 square meters—which in aggregate represent between 90–150 million square meters in France.

Can a solar power system be used in France?

A solar power system can be used to supply all your energy needs, although in France it's usually combined with an electric or gas heating system, as solar power cannot usually be relied upon year-round for heating and hot water.

How much solar power will France have in 2023?

This would almost double the installed solar capacity of France, which was 13.2GW as of 2021. Starting 1 July 2023, car parks with at least 80 places and up to 400 will have five years to comply with the new measure, while bigger car parks will be required to implement the changes in three years.

How will France achieve a tenfold increase in solar energy output?

The French Government announced its ambition to achieve by 2050 a tenfold expansion in solar energy output to exceed 100GW and to roll out fifty new offshore windfarms to reach 40GW. To do so, the bill includes provisions to cut

red tape and speed-up permitting procedures in specific 'acceleration zones'.

What are France's PV policies?

Long-Term Strategy: France's PV policies are guided by the National Low Carbon Strategy (SNBC), targeting carbon neutrality by 2050, and the Multi-Year Energy Programme (PPE), outlining 10-year energy objectives.
