# How to install an outdoor wireless base station AP

## Overview

---

What is a wireless access point (WAP)?

Installing a wireless access point (WAP). It extends your Wi-Fi network so you and your family can enjoy seamless connectivity throughout the home. If you're ready to boost your Wi-Fi, here are the steps you need to get your WAP setup to access a better home connection. What Is a Wireless Access Point?

What Is a Wireless Access Point?

.

What are outdoor WiFi access points?

Outdoor WiFi access points, also known as a wireless distribution system (WDS), PTP (point-to-point) bridge, and PTMP (point-to-multi-point) bridge, are commonly used to connect two or more locations together. They are often incorporated into networked surveillance solutions, or for entrance and gate access controls.

What is an outdoor wireless access point bridge?

In addition to outdoor wireless access point bridges, other uses include outdoor public WiFi, or automation controls. Outdoor WiFi access points, also known as a wireless distribution system (WDS), PTP (point-to-point) bridge, and PTMP (point-to-multi-point) bridge, are commonly used to connect two or more locations together.

What is a wireless access point?

Access points allow you to share a wireless signal by creating a wireless local area network (WLAN). They are ideal for use in areas where a wireless signal from your router may not reach. Unlike wireless range extenders, access points (AP) do not need to be within the wireless range of the router to share a wireless signal.

## How do I install a WAP?

**Gather Installation Materials:** You'll need an Ethernet cable to connect the WAP to your router, along with any required mounting hardware if you plan to place the WAP on a wall or ceiling. Having these materials ready before starting will make the installation process smoother. Setting up a WAP doesn't take long; it can be done in four easy steps.

## Where should a WAP be placed?

Place the WAP in a central area to cover a specific zone where you have connectivity issues, ideally away from walls, metal objects and electronic devices that could interfere with the signal. For multistory homes, placing WAPs on a different floor from your main router creates a seamless network.
