# **How to use wireless outdoor base station AP**

## Overview

---

What are the different types of outdoor AP installation options?

There are basically four options in outdoor AP installation: wall mounting, pole mounting, corner mounting and roof mounting.

Do you need an outdoor access point?

For outdoor deployments, an access point that is fully against dust and water ingress is needed. To survive the harsh environment outdoors, the access points must support an IP rating of IP65 or more, or irreversible damages might arouse due to water penetration.

Should APS be mounted on a pole?

Pole mounting is a good option when installing the APs away from the buildings, which is more common in a wireless mesh system where no cables need to be pulled to each location. It's ideal for providing a 360° overall coverage for your premises, but if the access point is mounted too close to the pole, the RF will be severely attenuated.

How do I install the unifi AP AC outdoor?

The recommended mounting of the UniFi AP AC Outdoor is on a pole. Optionally, the UniFi AP may be installed on a wall using additional hardware. Perform the steps for the appropriate installation: The Mounting Bracket must be mounted directly to a wood stud or other structurally stable surface using four fasteners (not included).

How do you install ethernet access points on a wall?

Wall mounting is one of the most common and fastest methods to install the access points to the outside wall, but multiple holes need to be drilled to let the Ethernet cables pass through and to secure the mounting brackets of the APs.

## How to mount access points on a vertical surface?

So when mounting the access points on a vertical surface, you should position the antennas in different directions (make the AP emulate a 180° antenna pattern) to mitigate the interference and avoid using an access point with internal antennas.
