Why are batteries important in offshore operations?

Batteries play an indispensable role in your offshore operations, either as a back-up to ensure the continuity of your key systems in the event of a mains failure, or even as a main source of power. Clearly, this in turn calls for the continuous integrity of your batteries.

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

How does a maritime battery system work?

In order to achieve these benefits, the maritime battery system has to be integrated into the electric power system. Traditionally, on board a ship there is an electrical power system for the "hotel load" and the auxiliary systems. The propulsion power is taken care of by a combustion engine, called main engine.

What are the NMA guidelines for chemical energy storage - maritime battery systems?

Specifically referenced is the Circular listed in Table 4-1: 'Guidelines for chemical energy storage - maritime battery systems' released by NMA 18 July 2016. This document outlines specific tests which are required to demonstrate a sufficient level of propagation protection and offgas risk assessment for any ship under the Norwegian Flag.

What is a containerized battery storage system?

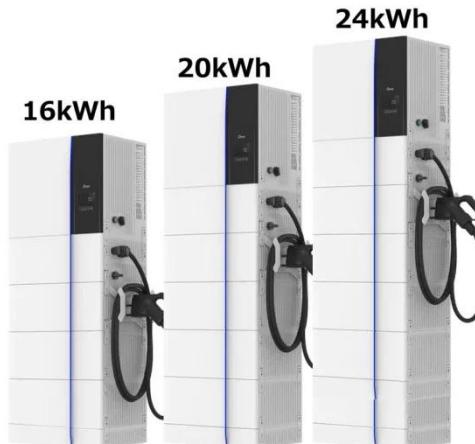

The containerized solution provides a safe, compact, and space-efficient solution for housing batteries on board a ship, either on the deck or below

deck. Multiple containers can be combined to create larger energy storage capacities, providing scalability based on the ship's energy requirements.

Can a ship be retrofitted with a battery system?

Build a vessel that will use a diesel or gas based power system that can easily be retrofitted with batteries in the future. This can be a good option for ships under construction or existing conventional designs. Build or retrofit a vessel with battery system and engines/motors installed and ready to run on battery from first day of operation.
