# **Is it recommended to install photovoltaic panels on the roof**

## Overview

---

Can a wall install a photovoltaic system?

Although less efficient, wall installations can supplement a photovoltaic system effectively. Balcony-mounted panels are primarily used in residential buildings. Typically, 1-2 panels are installed on the balcony railing. This setup can help reduce energy costs for apartments where roof installation is not feasible.

Should you install photovoltaic panels on your property?

Year by year, more people choose to install photovoltaic systems on their property. When opting for this form of energy generation, it is crucial to select appropriate panels and consider the right location for the installation.

What type of roof is best for a photovoltaic system?

Metal tile roofing is highly popular in Poland for its durability and ease of maintenance, making it an excellent base for photovoltaic systems. Panels are mounted using double-threaded screws anchored into roof beams. Aluminum adapters and rails are then attached, forming a foundation for the panels.

Where should photovoltaic panels be installed?

The choice of location is a critical factor during the installation of photovoltaic panels. Roofs—flat or sloped—are the most common installation sites, offering excellent sun exposure and energy production optimization. However, in some cases, such as when the roof is unsuitable, ground installation may be a better option.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

## Do felt roofs need special care during photovoltaic installation?

Felt roofs require special care during photovoltaic installation. As felt absorbs heat significantly, adequate ventilation between the panels and the roof is essential to prevent overheating, which could reduce system efficiency. Installations on felt roofs use special seals to prevent water infiltration at mounting points.
