# **Is the energy storage power supply a 3C product**

## Overview

---

However, in order to ensure the safety and quality of portable energy storage power supplies, the country has implemented a 3C certification system, and ZRLK, as the certification body, provides full support and guidance to applicants. What is a 3C lithium battery?

3C lithium battery comes with high energy density, high-speed charging, and good power supply. This battery is made to fulfill the demand for different electronic devices and provide a good power supply. These batteries have a good working life, so they handle charge and discharge cycles without affecting performance.

Why are 3C lithium batteries so popular?

Lithium batteries have become ubiquitous components of different portable electronic devices since they have high energy density, low weight, and a longer working life than other batteries. The main use of 3C lithium batteries over others is due to their good working performance and reliable nature.

What is a 3C discharge rate?

3C discharge rates are that the battery can discharge 3000 mA for one hour to release stored energy. Importance: C-rate matters. The high C rate determines faster battery discharging. A high C rate is good for applications where abrupt power bursts are needed, such as power tools and electric vehicles.

Are 3C lithium batteries safe?

The 3C lithium battery is safe to use. It is good to use batteries from famous brands and suppliers that follow quality control measures. The accurate handling and storage help to use the battery safely. Can 3C lithium batteries be recycled?
