

## SolarGrid Energy Solutions

# Is wireless outdoor base station AP useful

## Overview

---

Do I need an outdoor WiFi access point?

Without an outdoor wifi access point, you have probably noticed that your wifi signal is too weak. Exterior walls and glass are great at blocking wifi signals, so to solve this you really have to place an access point outside. An outdoor ap can also be used to extend your wireless network into your garage or outbuilding that you might have.

Which Ubiquiti access point is best for outdoor use?

The Unifi Mesh access point is at the moment the most popular access point from Ubiquiti to use outdoors. It comes with two adjustable Omni antennas that can be angled 45 degrees to cover the area beneath the access point better. The antennas are removable, allowing you to replace them with spot-beam antennae for example.

Can you use an outdoor wifi AP outside?

Exterior walls and glass are great at blocking wifi signals, so to solve this you really have to place an access point outside. An outdoor ap can also be used to extend your wireless network into your garage or outbuilding that you might have. They can be used to create a wireless bridge between two buildings.

Which outdoor wireless access points are best?

One of the more budget-friendly outdoor wireless access points is the CPE210 by TP-Link. Don't let the price fool you, though; this WAP has received raving reviews. The CPE210 features a tall, obelisk-like design with the TP-Link printed on the print.

Why do I need an outdoor access point?

The placement of the access point really determines the quality of the signal. Large metal objects near the access point can affect the signal strength, just

like any object between the outdoor ap and the client. With an outdoor access point, you can easily extend your wireless network outside.

Are outdoor access points weatherproof?

There are a lot of different outdoor access point available on the market. Keep in mind that 2.4 GHz signal is better for going through objects/trees. And 5 GHz will give you a higher throughput, but only with a clear line of sight. All the access points below are fully weatherproof and can be powered with Power over Ethernet.
