## Overview

---

Will EVN import electricity from Laos?

In October 2023, the Prime Minister approved a proposal to import electricity from various sources in Laos with a total capacity of 2,689MW. EVN has signed 19 power purchase agreements (PPA) to buy electricity from 26 Lao power plants with a total capacity of 2,240MW.

What is the price framework for electricity imports from Laos?

(KPL/VNA) The Ministry of Industry and Trade (MoIT) has issued a decision approving a price framework for electricity imports from Laos starting from December 31, 2025. The maximum price for hydroelectric power plants is set at 6.78 US cents/kWh, down from the current rate of 6.95 cents/kWh.

Does Laos re-import electricity?

Although a small percentage compared to total consumption in Laos, the amount of re-imported energy tells a bigger story: According to data from EDL, the state-run firm sells electricity to neighboring countries such as the Electricity Generating Authority of Thailand (EGAT) at a slightly lower price than what it pays to re-import from it.

Why is electricity so expensive in Laos?

EDL also imports electricity from the Thailand's Provincial Electricity Authority (PEA). However, under this deal, the price EDL pays for this imported power makes it almost twice as expensive as imported electricity sourced from EGAT. These power purchasing arrangements may well be contributing to the current electricity pricing in Laos.

Should Laos diversify its power supply?

To maintain power supply stability, she suggested that Laos diversify its sources of power to include more solar and wind energy. The price of both has dropped globally and, based on data collected by the Stimson Centre, the

price of these renewables is also getting cheaper in the Mekong region.

Does Lao PDR supply electricity to neighbouring countries?

Thus, electricity generated in Lao PDR can be supplied domestically as well as exported to neighbouring countries. The power transmission system of Lao PDR is divided into two types of transmission lines – one for domestic supply and one for export, where power plants are directly connected to neighbouring countries.
