Logistics emergency communication command base station

Overview

What is a code-compliant two-way communication system for rescue assistance?

A code-compliant two-way communication system for rescue assistance requires a central control point to manage emergency assistance calls from call boxes. Calls wait in queue until previous call is disconnected and receive a message stating that an emergency call is in progress. When the prior call clears, the next phone in queue is connected.

How do emergency calls work?

Calls wait in queue until previous call is disconnected and receive a message stating that an emergency call is in progress. When the prior call clears, the next phone in queue is connected. Works with either our 2100 or 2400 series models with a single pair back to the Distribution Module.

What is a WA EMD RMS station sysop?

Washington State RMS stations all share operational control and oversight from WA EMD and are coordinated by WA EMD Logistics LCU for optimal operational coordination and control. WA EMD SHARES RMS station SYSOPs are volunteers serving WA EMD Logistics LCU. All will receive training in WebEOC and will have WebEOC logins.
