# Malta Energy Storage Battery

## Overview

---

As part of Malta's long-term climate and energy goals to reduce carbon emissions from the energy sector, enhance the integration of renewable energy sources (RES), and strengthen the security of supply, the country is launching the procurement process for the design and construction of two utility-scale Battery Energy Storage Systems (BESS). Why is Malta a good place to store electricity?

By efficiently storing electricity for long durations, Malta's system can enable increased penetration of renewable energy from intermittent sources, maintain grid reliability, and accelerate the decarbonization of the energy sector.

Does Malta have a long-duration energy storage solution?

Malta has developed a long-duration energy storage solution that leverages steam-based heat pump technology to provide a cost-efficient, flexible, and integration-ready option for utility and industrial clients.

What is Malta's electro-thermal energy storage system?

Malta's electro-thermal energy storage system is built upon well-established principles in thermodynamics. Malta's electro-thermal energy storage system is built with abundant, field-proven components that are fully recyclable and reclaimable. Molten salt is the most mature technology used in thermal storage.

What happened to Malta energy storage?

Malta Energy Storage began as one of the "moonshot" projects assigned to X, the innovation branch of Google. Now it has been spun off into a separate standalone business. Can it survive the rigors of the marketplace?

.

What is the Malta PHES energy storage system?

The Malta PHES energy storage system is built upon well-established principles in thermodynamics and uses conventional components that have been present in power plants for hundreds of years. Electricity from the grid is used to heat molten salt and cool a chilled liquid. In these forms, energy can be efficiently stored for long durations.

What is energy in Malta?

Energy in Malta describes energy production, consumption and import in Malta. Malta has no domestic resource of fossil fuels and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs.
