## Overview

What is Anker Solix microinverter?

Anker SOLIX Microinverters offer flexible, efficient solar solutions with dual MPPT, 97.3% efficiency, and NEMA 6 protection. Available in 640W & 768W mode.

How do I install a microinverter envoy?

Make sure that the Envoy is plugged directly into the wall and not into a power strip or surge protector. Relocate your Envoy as close to the electrical service panel (load center) as possible. This ensures that the Envoy receives the strongest possible signal from each microinverter.

How does the envoy communicate with the microinverters?

The Envoy will then broadcast a signal to the microinverters. Within 5 minutes, a “Communication Level” indication of 0 to 5 bars will display on the Envoy LCD display. The Envoy requires a minimum of 3 bars to communicate effectively with the microinverters.

How does the Enphase microinverter work?

The Enphase Microinverter converts the DC output of the PV module into grid-compliant AC power. In addition to performing the DC to AC conversion, it maximizes energy production by using a sophisticated Maximum Power Point Tracking (MPPT) algorithm.

How many Enphase microinverters can envoy monitor?

Description: This system is currently in test mode. Model numbers (SKU) ENV-120-01 and ENV-120-02 can monitor up to 600 Enphase Microinverters. Envoy metering is qualified as +/- 5% or better. The Envoy is included in the List of Eligible System Performance Meters for the CSI program.

What should I do if my microinverter is unable to perform power conversion?

Recommended Action: No action is required unless the condition persists.

Description: The microinverter is temporarily unable perform power conversion. If the condition repeats or persists: Contact your installer to arrange for the installation of a replacement microinverter. Recommended Action: No action is required unless the condition persists.
