## Overview

---

How does a small cell base station communicate with a core network?

The small cell base station communicates with the core network over a high-speed backhaul connection. Core network: The core network manages the overall operation of the small cell network, including authentication, authorization, and routing of user traffic.

What are the functions of a small cell base station?

It includes various functions such as the User Plane Function (UPF), Control Plane Function (CPF), and Session Management Function (SMF). Transport network: The transport network provides the high-speed connectivity between the small cell base station and the core network.

What is a medium-range base station?

Medium-range base stations, which are adapted from microcell scenarios for Outdoor deployment. Small cells support various frequency bands defined by 3GPP [TS38.104], including FR1 and FR2 bands, which may be licensed, shared, or unlicensed, depending on deployment.

Where are small cells deployed?

Small cells deployed in rural areas to provide coverage and capacity where macrocells are not feasible. Agriculture, mining, oil and gas, transportation. Small cells deployed indoors to provide coverage and capacity in buildings, such as offices, hotels, hospitals, and shopping centers. Office buildings, hotels, hospitals, shopping centers.

Is NSA a 5G base station?

NSA allows carriers to deliver 5G data speeds without requiring a new 5G core buildout. Because we are in the beginning stages of 5G NR design, most base station applications are NSA. But this will change as 5G evolves into SA type system deployments. Figure 2. The Path to Standalone.

What challenges do base station component manufacturers face?

The Path to Standalone. A noted challenge for base station component suppliers and manufacturers is the number of stock-keeping-units (SKUs) required regionally. These fragmented band combinations at higher frequency ranges pressure suppliers and manufacturers to diversify product portfolios (see below figure).
