## Overview

Who generates electricity in Mogadishu?

CHARACTERIZING RESOURCES AND LOADS IN MOGADISHU In order to build the daily load profile of Mogadishu city, this study analyzed the power production of the three private electric suppliers in the area: BECO, MPS, and Blue-Sky. These companies generate the electricity that powers the city, with each one operating independently.

Why is electricity a priority in Somalia?

Expanding access to affordable, reliable, and sustainable electricity is an urgent priority in Somalia, which suffers from high energy costs and climate vulnerability despite negligible emissions.

Should Somalia invest in a hybrid PV/wind/diesel system?

The best balance between cost-competitiveness and environmental performance is struck by the hybrid PV/wind/diesel system. By investing in this configuration, Somalia could significantly curb its greenhouse gas emissions and air pollution at a reasonable cost.

How much does electricity cost in Somalia?

According to Power Africa, a US government initiative, electricity providers in Somalia charge consumers up to \$0.65 per kW h, primarily relying on isolated diesel-powered grids. 2 This rate significantly surpasses what consumers pay in many other parts of the world.

How hot is Mogadishu?

Mogadishu maintains warm temperatures year-round but exhibits seasonal variation, as revealed in the hourly NASA data in Fig. 4. 57 March and April bring the hottest days, with temperatures topping 31 °C—July and August experience lows around 25 °C. The annual temperature profile will inform the renewable system design.

## Are diesel generators a problem in Somalia?

The highest levels of carbon dioxide (CO<sub>2</sub>), nitrogen oxides (NO<sub>x</sub>), methane (CH<sub>4</sub>), sulfur hexafluoride (SF<sub>6</sub>), and particulate matter (PM) were produced by the diesel-only configuration. Diesel generator emissions constitute a significant concern for Somalia, which is vulnerable to climate change impacts.
