### What is Photovoltaic Glass?

Our photovoltaic glass offers a cutting-edge solution for both new construction and renovation projects. When integrated into ventilated façades, this glass enhances building aesthetics while providing key benefits such as radiation protection, thermal and acoustic insulation, and improved occupant comfort.

### What is amorphous silicon photovoltaic glass?

Amorphous silicon photovoltaic glass combines versatility with high performance. It ranges from fully opaque for maximum power generation to adjustable light transmittance levels. This solution enhances natural daylighting, provides unobstructed views, and effectively filters harmful ultraviolet (UV) and infrared (IR) radiation.

### Is Photovoltaic Glass a good investment?

Photovoltaic glass not only offsets conventional building material costs but also provides a tangible return on investment through energy generation. With an average payback time of 4 years and yearly ROIs of up to 20%, it stands as a sound economic choice.

### Which Photovoltaic Glass has the highest power output per square meter?

Crystalline silicon photovoltaic glass excels with the highest power output per square meter. This technology stands out for its exceptional performance, making it ideal for high-demand applications. Amorphous silicon photovoltaic glass combines versatility with high performance.

### What are the different types of Photovoltaic Glass Technologies?

To meet specific requirements, we offer two advanced photovoltaic (PV) glass technologies: amorphous silicon and crystalline silicon, both fully customizable. Crystalline silicon photovoltaic glass excels with the highest power output per square meter.

## What is a fully recycled photovoltaic module?

The fully recycled photovoltaic module uses n-type TOPCon technology and a golden size design. Upon testing, it has a conversion efficiency of up to 20.7% and a power output exceeding 645W. RESOLAR transports and recycles damaged PV modules from factories and decommissioned PV modules. The separation rate of solar cells and glass is high.
