## Overview

---

Are photovoltaic directly driven air conditioners beneficial for zero energy buildings?

Photovoltaic directly driven air conditioner (PVAC) systems are beneficial for the realization of zero energy buildings.

Do air conditioners and pvacs have zero-energy potential?

The higher the degree of dynamic energy matching between air conditioners and PVACs (Photovoltaic Air Conditioning Systems), the greater the zero-energy potential of PVACs. To investigate this potential, a one-minute timestep was used for simulating the dynamic energy consumption of air conditioners and the energy generation of PV systems.

Is there a zero-energy potential for air conditioners?

To investigate the potential for zero energy consumption, the study used a one-minute timestep for simulating the dynamic energy consumption of air conditioners and the energy generation of photovoltaic systems. The capacity of the PV system is determined by maximizing the hours of optimal energy matching to the total running time of the air conditioner.
