## Overview

---

### What is Electricity Resource Planning & Procurement Policy?

EPA Energy and Environment Guide to Action 7.1 Electricity Resource Planning and Procurement Policy Description and Objective Summary Most states require utilities to engage in a form of electricity resource As part of electricity resource planning to substantiate that the utility's plans for meeting demand for.

### What is a planning and procurement policy?

Effective planning and procurement policies may help parties evaluate the impact of market changes and regulations on existing and new electricity resources, and mitigate short-term cost fluctuations by developing robust and diverse resource portfolios that include energy efficiency, renewable energy, and CHP.

### What is centralized procurement?

Centralized procurement follows an approach where procurement activities are consolidated and run through a single, centralized department or team. In this procurement strategy, a central procurement team is responsible for managing and executing all procurement activities across the enterprise.

### What is the difference between centralized and decentralized procurement?

Centralized procurement enables cost savings and standardization, while decentralized procurement provides agility and local expertise. The optimal procurement strategy depends on an enterprise's size, structure, and specific operational needs.

### What are the benefits of a centralized procurement strategy?

A centralized procurement strategy offers several advantages to business, including: Centralized procurement enables standardization of procurement processes, eliminating redundancies and reducing administrative overheads.

This leads to higher efficiency.

What are energy resource planning and resource procurement processes?

Electricity resource planning and resource procurement processes are designed to mitigate the utilities' risk of planning imprudence; share information; and offer regulators, consumers, and other stakeholders an opportunity to influence utility decisions. From the late 1980s through the mid-1990s, IRP processes were common in the electric industry.
