Outdoor power transformer solution

Overview

What is an outdoor transformer used for?

An outdoor transformer is used to convert high voltage current into low voltage for domestic and commercial applications. Our range of oil type and epoxy cast current transformers is suitable for high tension transmission lines, specifically those ranging from 3.3 KV to 33KV.

Why should you choose a low-heat transformer?

As portable power systems are fully enclosed to provide protection from outdoor environments, heat can become trapped within the system box. We design low-heat transformers specifically with mobility in mind to keep your application working efficiently. Environmental Conditions.

What are the different types of portable power transformers?

Planned Application. Your intended use for your portable power transformer will also impact the design and power transformer product. Options can include step-up transformers, step-down transformers, isolation transformers, single-phase or three-phase transformers, and others.

What distinguishes a portable power unit from a stationary transformer?

Several design considerations differentiate portable power units from stationary transformers. These considerations include: Heat. As portable power systems are fully enclosed to provide protection from outdoor environments, heat can become trapped within the system box.

Why should you choose General Transformer Corporation?

When you choose General Transformer Corporation as your mobile power unit manufacturer, you are selecting decades of industry experience, an expert team of engineers, and a partner who will work with you from design through delivery. In addition to or as an element within your custom portable power system, we offer:
