## Overview

---

What is an uninterruptible power supply system?

Uninterruptible power supply systems can reduce downtime (and its cost) in manufacturing by providing reliable backup power in an emergency. A UPS allows your systems to shut down slowly, in alignment with standard procedures, as opposed to the rapid shutoff of an outage, which could damage the equipment.

Is Paraguay based on hydropower?

Paraguay is one of the few nations in the world in which the electrical system is based almost exclusively, on the generation of electrical energy from a renewable and non-polluting source: hydropower.

What is a Mitsubishi Electric uninterruptible power supply (UPS) system?

Mitsubishi Electric uninterruptible power supply (UPS) systems provide daily power conditioning as well as backup power in the event of an outage to reduce damage to manufacturing equipment and maintain uptime for your production line.

What are Paraguay's environmental commitments?

Paraguay has assumed various environmental commitments based on international agreements; among them the Paris Agreement and the fight against climate change; commitments reflected in guidelines established in the Energy Policy of the Republic of Paraguay 2040.

Should Paraguay be a COP26 country?

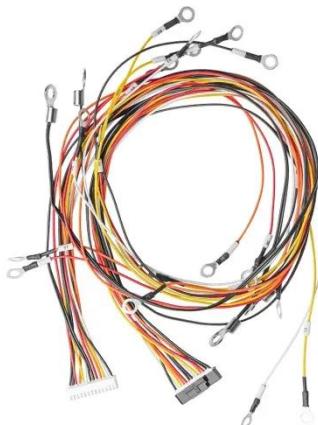

At a time when global emphasis is on decarbonization and emission reduction, and countries are discussing climate change at COP26, Paraguay must take advantage of the potential of being a country with renewable energy resources and implement fiscal, industrial, labor and social policies to promote its energy transition.

Why should a manufacturing facility use an ups?

A UPS is able to match the higher power requirements of a manufacturing facility to ensure you have constant protection even during peak usage points in your cycle. It can handle the elevated power required for motors, robotics, drives - everything you need to keep your production line running while protecting critical equipment from surges.
