Overview

What is a Grade B solar panel?

Grade B solar panels have visual defects but meet performance specifications. These solar panels are less common than grade A solar panels but are typically available from manufacturers upon request. Most manufacturers keep these panels for testing purposes but sell them with warranties like grade A solar panels.

Do you sell grade B solar panels?

Most manufacturers and distributors only sell grade A and B solar panels, scrapping C solar panels and recycling D solar panels. A's are typically the most advertised and sold. However, some do sell grade B solar panels upon request.

What is a Grade A solar panel?

Grade A solar panels have no visual defects and meet performance specifications. These are the most popular solar panels and are sold at market value. They typically come with manufacturer warranties and are the best solar panel for businesses and suburban homes as they provide ample power and look good.

Do grade B solar panels affect performance?

Grade B solar panels have some visual defects that do not affect performance. Grade B naturally falls below grade A in this grading system. So how does Grade B stack up against the other grades?

Grade A solar panels are entirely free of defects. Grade B has some visual flaws but still meets performance standards.
