What is a fully recycled photovoltaic module?

The fully recycled photovoltaic module uses n-type TOPCon technology and a golden size design. Upon testing, it has a conversion efficiency of up to 20.7% and a power output exceeding 645W. RESOLAR transports and recycles damaged PV modules from factories and decommissioned PV modules. The separation rate of solar cells and glass is high.

What is the separation rate of solar cells and glass?

The separation rate of solar cells and glass is high. Through Ag separation and impurities removal of damaged solar cells from the PV factories or dismantling PV modules, damaged solar cells are converted into 6N silicon. Recycled 6N silicon are cast into silicon ingots.

How resolar is used to separate solar cells & glass?

RESOLAR adopts a method combining of physical crushing, chemical pyrolysis and chemical immersion , so that the separation rate of solar cells and glass is high. Separated solar cells directly enter the steps of silver separation and impurities removing.

Who is Resol & why is it a hidden champion in photovoltaic recycling?

RESOLAR and its affiliated companies have over 16 years of experience in photovoltaic recycling, making them the hidden champion in the industry. The team began researching module recycling technology.

Will the Circular Economy Act regulate low-price competition in photovoltaic industry?

Vice Director of the Photovoltaic Professional Committee in China Renewable Energy Society The EU launches a call for evidence on the Circular Economy Act. The draft revision of the Price Law in China is now open for public comments, which may regulate low-price competition in the photovoltaic

industry.
