be used for electrical  
appliances**

## Overview

---

A portable power station, also known as a portable battery pack or a portable power supply, is a self-contained unit that stores electrical energy and can be used to power electronic devices. What appliances can a portable power station run?

Typically, most portable power stations can run small household appliances and electronic devices such as radios, stereos, coffee makers, laptops, LED lights, and even TVs. To determine what appliances your portable power station can run, you need to understand two key specifications: watt-hours (Wh) and power requirements (watts).

What is a portable power source?

Portable power sources are mobile units that provide electrical power without the need for a stationary outlet. These innovative devices have revolutionized the way we access and utilize power, especially in remote or off-grid locations.

Are portable power stations a good choice?

With the ability to power a variety of devices, ranging from smartphones and laptops to power tools and medical equipment, portable power stations are proving to be much more than just a backup power source. Their flexibility, ease of use, and environmental benefits make them a smart choice for anyone in need of reliable and sustainable power.

Why do you need a portable power station?

Portable power stations are not just for small gadgets; they can also be used to power essential appliances during power outages or in areas where the electrical grid is unavailable. A portable power station can keep vital appliances running, providing both comfort and safety during emergencies.

What can a portable power station charge?

All portable power stations can charge up small gadgets like phones and laptops or be used to power lighting. Most can handle small appliances like mini-fridges or TVs. If you want to use power tools, an AC unit, or in the UK, a kettle, you need to be able to draw thousands of watts.

What items can be charged by a portable power station?

Smaller items, phones, fans, and tablets for example, can be charged by most portable power stations. Remember to make sure to check if the portable power station that you're going to buy can run more power-consuming devices.
