Power circuit breaker factory

Overview

What are circuit breakers used for?

Our circuit breakers are equipped with the world's most advanced automatic production line, featuring an annual capacity of 60,000 units. Products are used in a variety of industries, including nuclear power plants, power plants, substations, urban and rural power grids, petrochemical, metallurgy, railways, and ports.

What is a power circuit breaker?

Power circuit breakers are designed not only to carry the rated normal currents continuously but isolate the faulty section of the system under all normal and abnormal condition, and shall also be capable of interrupting load currents, capacitive and small inductive currents.

How many units can a circuit breaker produce?

Equipped with world's most advanced automatic production line. Annual production capacity over 50,000 units. Our circuit breakers are equipped with the world's most advanced automatic production line, featuring an annual capacity of 60,000 units.

What are industrial circuit breakers?

Industrial circuit breakers are components integrated within the electrical systems of warehouses, factories, and large industries. They are classified based on their structural features, construction, interruption mechanism, and volt class.

What are the different types of circuit breakers?

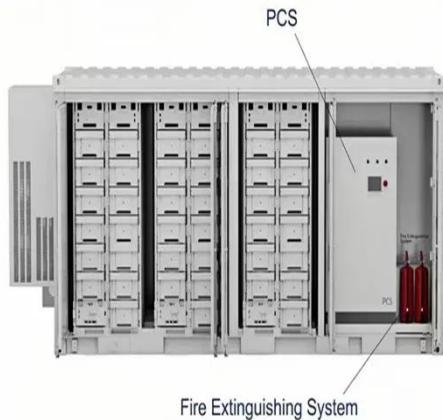

In terms of voltage level, it can be divided into HV circuit breakers, MV circuit breakers and LV circuit breakers. Based on its arc extinguishing materials, it has oil-immersed type, vacuum type and filling-in SF6 air. Divided by structure: There are universal (frame type), plastic shell type, and small micro

break;.

Why do you need a new circuit breaker?

Investment in research and development has enabled us to introduce more new circuit breakers to meet the varied requirements of customers across numerous industries. These breakers have been widely praised for their excellent stability and safety.
