Why do we need energy storage systems in Spain?

Energy storage systems in Spain are a key element in the fight against climate change, as they help us to address the challenge of the energy transition. These systems make renewable energy production more flexible; and therefore help us to guarantee its integration into the Spanish electricity system.

Which country has the most energy storage systems in Europe?

With more than 20,000 megawatts, Spain is the country with the largest number of energy storage systems in Europe measured by power, and has the second largest number of projects: 128 in total; second only to Germany's 169.

How does Iberdrola support energy storage?

In terms of energy storage, Iberdrola sees it as a key driver of decarbonisation and the energy transition, enabling large-scale and small-scale storage through pumped storage and lithium-ion battery technology to support the electrification of the energy system.

Why do solar and wind energy systems need a storage system?

Renewable energies, such as solar and wind energy, depend on environmental factors that are intermittent and uncontrollable, and require the support of storage systems to be able to meet energy demands at off-peak periods and

make the most of every green megawatt (MW) generated at peak periods.

Why should we invest in a battery plant in Extremadura?

This plant represents a significant investment and boost for the development of the sustainable mobility sector, the energy transition and the battery supply chain in the region of Extremadura and the rest of the Spanish territory.
