Production of large capacity uninterruptible power supply

Overview

What is the uninterruptible power supply market?

Based on application, the uninterruptible power supply market is segmented into BFSI, data center, healthcare, telecommunication, industrial applications, government & defense, and others. The data center segment was valued at USD 3.9 billion in 2024 and is expected to grow at a rate of around 6.2% till 2034.

How big is the uninterruptible power supply market in 2024?

The solution segment dominated with over 80% market share, generating around USD 9.5 billion in 2024. What is the market size of the uninterruptible power supply (UPS) market in 2024?

The market was valued at USD 12.1 billion in 2024, with a projected CAGR of 5.6% from 2025 to 2034. What is the projected value of the UPS market by 2034?

.

Which country has the largest uninterruptible power supply market?

U.S. accounted for over 75% share in North America uninterruptible power supply market, generating revenue of USD 3.6 billion in 2024. The US has the biggest national market of UPS systems, which have been prompted by the presence of key technology firms and advanced data facility build-up.

What is Asia Pacific uninterruptible power supply market?

The Asia Pacific uninterruptible power supply market is anticipated to witness lucrative growth between 2025 and 2034. China is the largest market in Asia Pacific that has been facilitated by huge investments in data center infrastructure and industrial automation.

Which countries use uninterruptible power supplies (UPS) in 2024?

Legrand in October 2024 has launched its Keor MOD range of uninterruptible power supplies (UPS) in Europe that uses hot-swappable power modules, with intelligent energy management. France is also an important market of UPS systems owing to the government developments in digitization and smart city construction.

Why do power generation units need a strong power supply?

As the demands for a reliable power supply and electricity continue to grow, power generation units have increased their production capacities. The power transmission infrastructure, including substations, transmission lines, and distribution lines, are also being regularly used, which results in significant stress.
