# Pros and cons of photovoltaic tiles

## Overview

---

Even if they are a bit new to the market, solar roof tiles have been studied and developed greatly over the past several years. They have been made to be more durable and safer to use. Although, there is still a risk of failure, just like any other electrical system.

If you are thinking long-term, then yes. Replacing your current roofing with tile roof solar would be a big investment. Just as previously mentioned, the return on investment would.

Are solar tiles more efficient than solar panels?

Generally, solar tiles are less efficient than solar panels, with an efficiency of 10-20% compared to 16-22% for most solar panels. A roof has to have a perfect pitch and angle in order to be suitable for solar tiles installation, whereas solar panels are much easier to install on 'difficult' roofs.

Are solar tiles good for a pitched roof?

As such, solar tiles are best suited to pitched roofs. For solar tile products offered in the UK, such as GB Sol's solar slates, there is generally a minimum roof pitch of 22.5° required for installation. So, which is better: Solar roof or solar panels?

Are solar roof tiles worth it?

Solar roof tiles are still capable of producing as much electricity as a traditional solar panel system, but to achieve this you may have to cover your entire roof with them - and this comes with a very hefty price tag.

How are solar tiles different from integrated solar panels?

Solar tiles are different to integrated solar panels in that the latter are still solar panels but are installed flush with the roof surface, that is to say embedded into the roof itself. Solar tiles replace and resemble to surrounding roof slates. However, solar tiles work in the same way that conventional solar

panels do.

Are solar tiles expensive?

Given that solar tiles are a fairly new technology, they are still very expensive as compared to the cost of solar panels which are conventionally roof-mounted. They can easily cost twice as much. Solar tiles take longer to install than solar panels, with installation time being approximately one week.

What are solar roof tiles?

Solar roof tiles, also known as solar slates or solar shingles, are made to look a lot like normal roof tiles, except they also contain photovoltaic (PV) cells and can generate electricity. Unlike traditional solar panels, which sit on top of your roof, solar roof tiles are your roof, i.e. they completely replace your old tiles.
