Sarajevo Photovoltaic DC Combiner Box Company

Overview

What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I,V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

What is a solar combiner box?

In solar power plants, solar combiner boxes are essential components that facilitate the connection and management of multiple strings of solar panels. These boxes serve as junction points where the output from several solar arrays is combined into a single output, simplifying the wiring and reducing installation complexity.

Why do you need a high current PV combiner box?

Increasing the power of PV panels with half-cut cells leads to a rise in the power per string. This requires higher rated fuses, as well as a new approach to system design. Our new designs for high current PV combiner boxes offer easy adaptation and time savings for new developments. Are you looking for the perfect solution for your project?

What is a PV combiner box?

Since 2010, LSP has been dedicated to designing and manufacturing surge protective devices protecting installations from transient overvoltages that result from switching events and lightning strikes. PV combiner box combines PV array outputs, ensures safety with breakers and fuses, increases reliability, and simplifies connections.

How Kaco New Energy uses combiner boxes?

KACO new energy uses combiner boxes to support you with very flexible system design. First and foremost, DC combiners enable the "Virtual Central" concept: In ground-mounted solar power plants, the inverters are installed at a central location, while the DC combiners are spread across the PV module array.

Does ABB offer prewired solar combiner boxes?

ABB also offers prewired solar combiner boxes with not only string protection, surge protection and disconnection but also with additional monitoring devices. The monitoring device CMS PV collects all main information such as string current, voltage and temperature in one device.
