Service life of base station communication equipment

Overview

What makes a good base station shelter?

A good shelter should be wind-proof, water-proof, and dust-proof. It should also be secure from theft, and easy to pack. Shelters are widely used for base station deployment as they have advantages such as fast construction, low cost, modular design, and easy installation that make them preferable to equipment rooms.

Can a shelter be used on a bs8800 base station?

Traditionally, shelters have been applied to BTS sites but not MSC sites (due to size limitations). However, when used for small-sized base stations such as the BS8800, there is often room to spare. To better fit specific base stations, shelters need to have a customized design.

Can a diet shelter reduce energy consumption at a base station?

The diet shelter can reduce energy consumption at a base station site by between 20% and 60%. It can be lifted or carried as a whole—or assembled on site—and with side and back expansion capability, it is flexible to various spacial constraints.
