## Overview

---

We live on a planet called Earth. There are other planets in space near ours. Some are smaller and some are much bigger. All of these planets travel in circles around the Sun. Each planet travels in its own lane that we call an orbit. Like in a race when you are running and each person has.

One of the best ways for kids to learn more about space is by looking at the stars and the planets using a telescope. Check out our guides.

What are the components of the Solar System?

The solar system consists of the planets that orbit the Sun as well as such smaller bodies as dwarf planets, comets, and asteroids. The Oort Cloud is part of the solar system. It consists of countless small, icy objects. The solar system consists of the Sun and everything that orbits, or travels around, the Sun.

How do you make a solar system?

Cut out paper planets or mold them from play dough. Keep it simple and let them use their imagination to explore the cosmos. Hanging Mobile Solar System: A few strings, lightweight planets, and you've got a solar system that actually moves. Hang it up and watch the planets dangle in space. Papier-Mâché Planets: Messy, but totally worth it.

How do you make a solar system for kids?

We get a tiny universe. Solar System Craft for Kindergarten: Little ones love colors and shapes. Cut out paper planets or mold them from play dough. Keep it simple and let them use their imagination to explore the cosmos. Hanging Mobile Solar System: A few strings, lightweight planets, and you've got a solar system that actually moves.

What is a planetary system?

The solar system is also known as a planetary system. Since the 1990s scientists have found many planetary systems beyond our solar system. In these systems, one or more planets orbit a star—just as the eight planets in

our solar system orbit the Sun. These planets are called extrasolar planets.

How many planets are in the Solar System?

The Solar system has 8 planets In order from closest to the Sun to the farthest, the planets in the Solar system are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. All the planets have different characteristics, sizes, and are made of different things. For example, Jupiter is the biggest planet and is made mostly out of gas.

What are Solar System project ideas?

Whether it's for a school project or just an activity, the solar system project ideas make science tangible and accessible. The Solar system is the sun and everything that orbits around it. Days and nights are caused due to rotation of the planets in their own axes. It will be a day on sun facing side and night other side.
